WK DESIGNS AUSTRALIA ENVIRONMENT STATEMENT

As a manufacturer of a European brand named product it is paramount that only the very highest levels of attainment is good enough.

In today's environment, this must include a commitment to environmental compatibility.

Right from the initial development stage, from the choice of materials, production and transportation, quality furniture must comply with strict ecological standards.

Sub-contractors are required to undertake to supply exclusively products containing no substances hazardous to health.

- Covers - The material and finish of upholstery fabrics must be non aggressive to the skin.
- Padding - All padding material must be manufactured without the use of CFC's and must comply with the requirements of modern furnishing hygiene. When glue joints are called for low solvent adhesives are use. The use of water-soluble adhesives is a primary objective.
- Frames - Wherever chipboard is used for design reasons, only E1 quality materials are used.
- Packing - Reusable and recycled product is used whenever possible.

WK Designs Australia strives to ensure a high percentage of each product manufactured can be recycled at the end of its life.
